

PRO STONE

Surface water and oil proofer

A new generation product

Up to now, water-proofing products did not protect supporting structures or surfaces against grease stains, and the use of water and oil proofers was difficult and cumbersome .
Such solvent-based products frequently are for specific applications only or are incompatible with certain materials, complicating their use .

PRO STONE is an aqueous solution, and the problems relative to solvents are therefore not given .

Being both a water and oil proofer, PRO STONE prevents the penetration of water and/or greasy substances into treated porous materials, while allowing them to ' breathe ' .

With PRO STONE no particular precaution is required either prior to, or during, its application .

Protect all porous materials

For instance :

- * Limestone, tufa
- * Granite, marble, sandstone
- * Bricks, terra cotta tiles
- * Building concrete
- * Mineral coating, plaster, grouting
- * Natural stone paving
- * Interlocking pavers

A unique product for multiple applications : Walls, roofs, floors ...

PRO STONE is for application to vertical and horizontal supporting structures or surfaces, inside and outside .

Its application is particularly recommended for protecting :

- * Facades (on old or new buildings, when resurfacing or renovating)
- * Historical monuments
- * Pedestrian zone paving (against chewing-gum)
- * Terraces, balustrades
- * Inside fireplaces, barbecues
